Subject index

Acetone and butanol, continuous production of, with adsorbed cells, control of cell adhesion and activity during, 230

Acetone–butanol–ethanol fermentation, continuous monitoring of, application of the headspace gas chromatographic technique, 543

Achromobacter parvulus IFO-13182, NADPH production from $NADP^+$ using malic enzyme of, 418

Acid and enzymic hydrolysis of chaotropically pretreated millet stalk acha and rice straws and conversion of the products to ethanol, 115

Acinetobacter calcoaceticus, production of quinoprotein D-glucose dehydrogenase in the culture medium of, 613

Acremonium chrysogenum, raised-titre strains of, production of cephalosporin C, and its intermediates, by, 389

Activated sludge, gamma irradiation of, 179

Adsorbed cells, control of cell adhesion and activity during continuous production of acetone and butanol with, 230

Affinity partitioning using polymer-bound triazine dyes, partial purification of D-glucose-6-phosphate dehydrogenase from bakers' yeast, 629

Alginate-immobilized *Chlorella*, physiology of, 212

Alkali process for enhancing susceptibility of autohydrolysed beech sawdust to enzymatic hydrolysis, 126

Alkene-utilizing bacteria, stereospecific formation of 1,2-epoxypropane, 1,2-epoxybutane and 1-chloro-2,3-epoxypropane by, 17

Amino acid and peptide derivatives of dimenthyl 5-aminoisophthalate as flurogenic substrates for proteinases, 300

α-Amylase production in aqeuous two-phase systems with *Bacillus subtilis*, 333

Anaerobic expanded bed reactor, studies with, comparing the performances achieved with synthetic waste and domestic sewage, 401

Anaerobic fermentation: microbes from ruminants, 98

Aqueous two-phase systems, α-amylase production in, with *Bacillus subtilis*, 333

Aqueous two-phase systems, extraction of chromatophores from *Rhodospirillum rubrum* in, a method for large-scale isolation of membrane particles, 601

Arthrobacter simplex, immobilized, maintenance and operational stability, for the Δ^1-dehydrogenation of steroids, 377

Aspergillus fumigatus IMI 255091, production of β-D-glucosidase, endo-1,4-β-D-glucanase and D-xylanase from straw by, 225

Aspergillus fumigatus, increases in endo-1,4-β-D-glucanase titres produced by, through application of simple statistical methods, 134

Aspergillus phoenicus, scanning electron microscopic examination of calcium alginate beads immobilizing growing mycelia of, 121

Aspergillus terreus F-413, immobilization of cellulase and D-xylanase complexes from, on controlled porosity glasses, 395

Autotrophic production of microalgae, system design for, 474

Bacillus subtilis, α-amylase production in aqueous two-phase systems with, 333

Batch fermentations in 20% D-glucose with *Saccharomyces cerevisiae*, enzyme induction by oxygen in the accumulation of cytochrome *P*-450 during, 553

Batch reactor process, a mathematical model for, kinetics of the enzymatic hydrolysis of cellulose: (1), 346

Bacterial enzyme, a versatile: L-methionine γ-lyase, 530

Bentonite, immobilization of cane invertase on, 454

Bentonite, immobilization of dextranase on, 279

p-Benzoquinone activation of metal oxide electrodes for attachment of enzymes, 283

Bioaffinity phenomena and molecular immobilization, a quick reference summary of recent literature on, 42, 90, 139, 182, 243, 307, 361, 409, 468, 521, 578, 635

Biofuel anode based on D-glucose dehydrogenase, nicotinamide adenine dinucleotide and a modified electrode, 549

Biomass, microbial, and keratin, fertilizer potential of some commercially available forms of, 108

Biomass, plant cell, breakdown of, by filamentous fungi, 61

Biomass production, continuous, failure simulation in, 322

Biomass, retention of, on suspended particles, protease productivity in chemostat fermentations with, 443

Calcium alginate, nitrifying bacteria immobilized in, characterization of, 155

Calcium alginate beads immobilizing growing mycelia of *Aspergillus phoenicus*, scanning electron microscopic examination of, 121

Cane invertase, immobilization of, on bentonite, 454

Carbohydrate profile for *Hansenula polymorpha*, 339

Carboxyl-containing carriers, soluble, enzyme immobilization on, optimization of reaction conditions during, 11

Carrageenan, microalgae immobilized in, wastewater nutrient removal with, 621

Carriers, soluble carboxyl-containing, enzyme immobilizationon, optimization of reaction conditions during, 11

Cell adhesion and activity, control of, during continuous production of acetone and butanol with adsorbed cells, 230

Cellulase activity, determining and assaying for reducing sugars, comparison of the 3,5-dinitrosalicylic acid and Nelson–Somogyi methods of, 327

Cellulase and D-xylanase complexes from *Aspergillus terreus* F-413, immobilization of, on controlled porosity glasses, 395

Cellulases, saccharification by, measurement of, 586

Cellulolytic activities of *Penicillium funiculosum*, production of xylanolytic enzymes in association with, 295

Cellulolytic system of *Clostridium thermocellum*, major characteristics of coincide with those of the purified cellulosome, 37

Cellulose, enzymic saccharification of, β-D-glucosidase: multiplicity of activities and significance to, 465

Cellulose, kinetics of the enzymatic hydrolysis of: 1. A mathematical model for a batch reactor process, 346

Cellulose kinetics of the enzymatic hydrolysis of: 2. A mathematical model for the process in a plug-flow column reactor, 383

Cellulosome, purified, major characteristics of the cellulolytic system of *Clostridium thermocellum* coincide with those of, 37

Cephalosporin C, production of, and its intermediates, by raised-titre strains of *Acremonium chrysogenum*, 389

Chemostat fermentations with retention of biomass on suspended particles, protease productivity in, 443

Chlamydomonas reinhardtii, hydrogen and oxygen photoproduction by, long-term endurance and selection studies in, 169

Chlorella, alginate-immobilized, physiology, 212

Chromatophores, extraction of, from *Rhodospirillum rubrum* in aqueous two-phase systems: a method for large-scale isolation of membrane particles, 601

Cloning the D-xylose isomerase gene, overproduction of D-xylose isomerase in *Escherichia coli* by, 592

Clostridium thermocellum, major characteristics of the cellulolytic system of coincide with those of the purified cellulosome, 37

Concanavalin A-Sepharose, sucrose hydrolysis using invertase immobilized on, 175

Containment and release of microorganisms from applied genetics activities, 314

Continuous monitioring of the acetone–butanol–ethanol fermentation, application of the headspace gas chromatographic technique for, 543

Controlled pore supports for enzyme immobilization, using the rotational masking concept to enhance substrate inhibited reaction rates, 266

Control of cell adhesion and activity during continuous production of acetone and butanol with adsorbed cells, 230

Covalent attachment of epoxide hydrolase to dextran, 66

Cytochrome *P*-450, accumulation of, during batch fermentations in 20% D-glucose with *Saccharomyces cerevisiae*, enzyme induction by oxygen in, 553

Cytophaga sp., use of a lytic enzyme system from, in the lysis of Gram-positive bacteria, 73

Daedalea flavida, white-rot fungus, laccase production and wood degradation by, 405

Deactivations, enzyme, categorization of, using a series-type mechanism, 50

Deactivation, thermal, chemical and proteolytic, enzyme stabilization towards, 78

DEAE-cellulose activated with chloride compounds, immobilization of glucoamylase on, 557

Desacetoxycephalosporin C synthetase after inactivation, dithiothreitol reactivates, 353

Dextranase, immobilization of, on bentonite, 279
Dextranase, *Paecilomyces lilacinus*, purification and characterization of, 573
Dextran, covalent attachment of epoxide hydrolase to, 66
Dimethyl 5-aminoisophthalate, amino acid and peptide derivatives of, as fluorogenic substrates for proteinases, 300
3,5-Dinitrosalicyclic acid and Nelson–Somogyi methods of assaying for reducing sugars and determining cellulase activity, comparison of, 327
Dithiothreitol reactivates desacetoxycephalosporin C synthetase after inactivation, 353
Division and growth of mesophyll cells isolated from *Psoralea bituminosa* leaves, 437
Downstream processing, on-line monitoring of enzymes in, by flow injection analysis (FIA), 607

Electrodes, metal oxide, *p*-benzoquinone activation of, for attachment of enzymes, 283
Endo-1,4-β-D-glucanase, β-D-glucosidase and D-xylanase, production of, from straw by *Aspergillus fumigatus* IMI 255091, 225
Endo-1,4-β-D-glucanase titres, increases in, produced by *Aspergillus fumigatus* through application of simple statistical methods, 134
Engineering aspects of solid state fermentation, 258
Enzymatic hydrolysis of cellulose, kinetics of: 2. A mathematical model for the process in a plug-flow column reactor, 383
Enzymatic hydrolysis of lactose, product inhibition of, 510
Enzyme deactivations, categorizations of, using a series-type mechanism, 50
Enzyme induction by oxygen in the accumulation of cytochrome *P*-450 during batch fermentations in 20% D-glucose with *Saccharomyces cerevisiae*, 553
Enzymes, *p*-benzoquinone activation of metal oxide electrodes for attachment of, 283
Enzymes, on-line monitoring of, in downstream processing by flow injection analysis (FIA), 607
Enzyme stabilization towards thermal, chemical and proteolytic deactivation, 78
Enzymic and acid hydrolysis of chaotropically pretreated millet stalk, acha and rice straws and conversion of the products to ethanol, 115
Epoxidation of propylene utilizing *Nocardia corallina* immobilized by gel entrapment or adsorption, 503
Epoxide hydrolase, covalent attachment of, to dextran, 66
1,2-Epoxypropane, 1,2-epoxybutane and 1-chloro-2,3-epoxypropane, stereospecific formation of, by alkene-utilizing bacteria, 17
Escherichia coli, overproduction of D-xylose isomerase in, by cloning the D-xylose isomerase gene, 592
Escherichia coli, purification and immobilization of NAD^+ synthetase from, 493
Ethanol, acid and enzymic hydrolysis of chaotropically pretreated millet stalk, acha and rice straws and conversion of the products to, 115
Ethanol fermentation characteristics of *Thermoanaerobacter ethanolicus*, 87
Ethanol production from D-glucose, examination of immobilized cells in a rotating packed drum reactor for, 561
Ethanol production from wood and agricultural residues by *Neurospoora crassa*, 625
Ethanol production, kinetics of, by immobilized cells of *Zymomonas mobilis* at varying D-glucose concentrations, 462
Ethanol removal, *in situ*, effect of, on fermentation of D-xylose by *Pachysolen tannophilus*, 217
Extracellular β-D-xylosidase of *Sclerotium rolfsii*, 445
Extraction of β-D-fructofuranosidase (an exo-inulase), efficient, non-killing, from *Kluyveromyces fragilis* at high cell density, 239

Failure simulation in continuous biomass production, 322
Fats, enzymic interestification of: effect of non-lipase material on immobilized enzyme activity, 567
Fenton's reaction and glucose oxidase, coupling of, for a simple and inexpensive assay of β-glucosidase, 449
Fermentation, alcoholic, of whey permeate by *Kluyveromyces fragilis* NRRL 665 and *Kluyveromyces lactis* NCYC 571, metabolic, physiological and kinetic aspects of, 287
Fermentation, anaerobic: microbes from ruminants, 98
Fermentation characteristics, ethanol, of *Thermoanaerobacter ethanolicus*, 87
Fermentation of D-xylose by *Pachysolen tannophilus*, effect of *in situ* ethanol removal on, 217
Fermentations, chemostat, protease productivity in, with retention of biomass on suspended particles, 443
Fermentation, solid state, engineering aspects of, 258
Fermentation, solid-state, of natural birch lignin by *Phanerochaete chrysosporium*, 150
Fermentations using immobilized whole cells, mass transfer effects in, 2
Fertilizer potential of some commercially available forms of keratin and microbial biomass, 108
Fungal peroxidases, cellulase and D-glucose oxidase, immobilized, lignocellulose biotransformation with, 564
Fungi, filamentous, breakdown of plant cell biomass by, 61
Flavobacterium, microbiological removal of pentachlorophenol from soil using, 617
Flow injection analysis (FIA), on-line monitoring of enzymes in downstream processing by, 607
Flow injection analysis (FIA), rapid on-line protein detection in biotechnological processes by, 146
Fluorogenic substrates for proteinases, amino acid and peptide derivatives of dimethyl 5-aminoisophthalate, 300
β-D-Fructofuranosidase (an exo-inulase), efficient, non-killing extraction of, from *Kluyveromyces fragilis* at high cell density, 239

α-D-Galactosidase from *Lactobacillus fermenti*, kinetic properties of, 207
β-D-Galactosidases immobilized on soluble matrices: kinetics and stability, 515
Gamma irradiation of activated sludge, 179
Gelatin-entrapped and surface-bound glucoamylase, comparison of action patterns of, on an α-amylase degraded starch substrate: a critical examination of reversion products, 22
Gelatin matrix, open pore, immobilization of *Kluyveromyces marxianus* cells containing inulinase activity in: 1. Preparation and enzymatic properties, 373
Glucoamylase, gelatin-entrapped and surface-bound, comparison of action patterns of, on an α-amylase degraded starch substrate: a critical examination of reversion products, 22
Glucoamylase, immobilization of, on DEAE-cellulose activated with chloride compounds, 557
Glucoamylase, immobilized, preparation characterization and laboratory-scale application of, 488
D-Glucose dehydrogenase, nicotinamide adenine dinucleotide and a modified electrode, biofuel anode based on, 549
D-Glucose dehydrogenase, quinoprotein, production in the culture medium of *Acinetobacter calcoaceticus*, 613
D-Glucose isomerase, whole cell immobilization of, studies on sugar isomerases of *Lactobacillus* sp., 499
Glucose oxidase and Fenton's reaction, coupling of, for a simple and inexpensive assay of β-glucosidase, 449
D-Glucose-6-phosphate dehydrogenase, partial purification of, from bakers' yeast by affinity partitioning using polymer-bound triazine dyes, 629
D-Glucose, pilot-scale production of L-phenylalanine from, 370
β-Glucosidase, coupling of glucose oxidase and Fenton's reaction for a simple and inexpensive assay of, 449
β-D-Glucosidase, endo-1,4-β-D-glucanase and D-xylanase, production of, from straw by *Aspergillus fumigatus* IMI 255091, 225
β-D-Glucosidase: muliplicity of activities and significance to enzymic saccharification of cellulose, 465
Gram-positive bacteria, use of a lytic enzyme system from *Cytophaga* sp. in the lysis of, 73

Hansenula polymorpha, determining a carbohydrate profile for, 339
Headspace gas chromatographic technique for continuous monitoring of the acetone–butanol–ethanol fermentation, application of, 543
Hexokinase, yeast, soluble and immobilized, comparative studies on, 275
High fructose syrup production, immobilization of *Kluyveromyces marxianus* cells containing inulinase activity in open pore gelatin matrix: 2. Application for, 459
Hydrolysis, acid and enzymic, of chaotropically pretreated millet stalk, acha and rice straws and conversion of the products to ethanol, 115
Hydrolysis, enzymatic, alkali process for enhancing susceptibility of autohydrolysed beech sawdust to, 126
Hydrolysis, enzymatic, of lactose, product inhibition of, 510
12α-Hydroxysteroid dehydrogenase and glutamate dehydrogenase, coimmobilized, with $NADP^+$ cycling at high efficiency, preparation of 12-ketochenodeoxycholic acid from cholic acid using, 597

Immobilization and purification of NAD^+ synthetase from *Escherichia coli*, 493
Immobilization, enzyme, controlled pore supports for: using the rotational masking concept to enhance substrate inhibited reaction rates, 266
Immobilization, enzyme, on soluble carboxyl-containing carriers, optimization of reaction conditions during, 11
Immobilization, molecular, and bioaffinity phenomena: survey nos 37–48, a quick reference summary of recent literature on, 42, 90, 139, 182, 243, 307, 361, 409, 468, 521, 578, 635
Immobilization of cane invertase on bentonite, 454
Immobilization of cellulase and D-xylanase complexes from *Aspergillus terreus* F-413 on controlled porosity glasses, 395
Immobilization of dextranase on bentonite, 279
Immobilization of glucoamylase on DEAE-cellulose activated with chloride compounds, 557
Immobilization of *Kluyveromyces marxianus* cells containing inulinase activity in open pore gelatin matrix: 1. Preparation and enzymatic properties, 373
Immobilization of *Kluyveromyces marxianus* cells containing inulinase activity in open pore gelatin matrix: 2. Application for high fructose syrup production, 459
Immobilization of pig muscle 3-phosphoglycerate kinase, 357
Immobilization, whole cell, of D-glucose isomerase, studies on sugar isomerases of *Lactobacillus* sp., 499
Immobilized and soluble yeast hexokinase, comparative studies on, 275
Immobilized, calcium alginate, *Kluyveromyces marxianus* cells, improvement of inulinase stability of, by treatment with hardening agents, 34
Immobilized cells, examination of, in a rotating packed drum reactor for the production of ethanol from D-glucose, 561
Immobilized cells of *Zymomonas mobilis*, kinetics of ethanol production by, at varying D-glucose concentrations, 462
Immobilized cellulase, D-glucose oxidase and fungal peroxidases, lignocellulose biotransformation with, 564
Immobilized enzyme activity, effect of non-lipase material on, enzymic interesterification of fats, 567
Immobilized, β-D-galactosidases, on soluble matrices: kinetics and stability, 515
Immobilized invertase, on concanavalin A-Sepharose, sucrose hydrolysis using, 175
Immobilized *Lactobacillus casei*, lactic acid production from whey permeate by, 164
Immobilized ligand, macrokinetics of enzyme sorption on porous beads accompanied by complex formation with, 111
Immobilized microalgae, in carrageenan, wastewater nutrient removal with, 621
Immobilized *Nocardia corallina*, by gel entrapment or adsorption, epoxidation of propylene utilizing, 503
Immobilized nitrifying bacteria, in calcium alginate, characterization of, 155
Immobilized thermophilic bacteria as a source of respiratory chain for the recycling of NAD^+, 29
Immobilized whole cells, mass transfer effects in fermentations using, 2
Immobilized-yeast reactors, flow rate and bead size as critical parameters for, 538
Immobilizing, calcium alginate beads, growing mycelia of *Aspergillus phoenicus*, scanning electron microscopic examination of, 121
Inactivation, dithiothreitol reactivates desacetoxycephalosporin C synthetase after, 353
Interesterficiation of fats, enzymic: effect of non-lipase material on immobilized enzyme activity, 567
Inulinase activity in open pore gelatin matrix: immobilization of *Kluyveromces marxianus* cells containing: 1. Preparation and enzymatic properties, 373
Inulinase, immobilization of *Kluyveromyces marxianus* cells containing activity, in open pore gelatin matrix: 2. Application for high fructose syrup production, 459
Inulinase stability of calcium alginate immobilized *Kluyveromyces marxianus* cells, improvement of, by treatment with hardening agents, 34
Invertase, cane, immobilization of, on bentonite, 454
Invertase immobilized on concanavalin A-Sepharose, sucrose hydrolysis using, 175
Isomerization of xylose, enzymatic, kinetic studies of the, 129

Keratin and microbial biomass, fertilizer potential of some commercially available forms of, 108
12-Ketochenodeoxycholic acid, preparation of, from cholic acid using coimmobilized 12α-hydroxysteroid dehydrogenase and glutamate dehydrogenase with $NADP^+$ cycling at high efficiency, 597
Kinetic properties of α-D-galactosidase from *Lactobacillus fermenti*, 207
Kinetics and stability of β-D-galactosidases immobilized on soluble matrices, 515
Kinetics of the enzymatic hydrolysis of cellulose: 1. A mathematical model for a batch reactor process, 346
Kinetics of the enzymatic hydrolysis of cellulose: 2. A mathematical model for the process in a plug-flow column reactor, 383
Kinetic studies of the enzymatic isomerization of xylose, 129
Kluyveromyces fragilis, efficient, non-killing extraction of β-D-fructofuranosidase (an exo-inulase) from, at high cell density, 239
Kluyveromyces fragilis NRRL 665 and *Kluyveromyces lactis* NCYC 571, metabolic, physiological and kinetic aspects of the alcoholic fermentation of whey permeate by, 287
Kluyveromyces lactis NCYC 571 and *Kluyveromyces fragilis* NRRL 665, metabolic, physiological and kinetic aspects of the alcoholic fermentation of whey permeate by, 287
Kluyveromyces marxianus cells, calcium alginate immobilized, improvement of inulinase stability of, by treatment with hardening agents, 34
Kluyveromyces marxianus cells containing inulinase activity, immobilization of, in open pore gelatin matrix: 2. Application for high fructose syrup production, 459
Kluyveromyces marxianus cells, immobilization of, containing inulinase activity in open pore gelatin matrix: 1. Preparation and enzymatic properties, 373

Laccase production and wood degradation by a white-rot fungus *Daedalea flavida*, 405
Lactic acid production from whey permeate by immobilized *Lactobacillus casei*, 164
Lactobacillus casei, immobilized, lactic acid production from whey permeate by, 164
Lactobacillus fermenti, kinetic properties of α-D-galactosidase from 207
Lactobacillus sp., studies on sugar isomerases of: whole cell immobilization of D-glucose isomerase, 499
Lactose, enzymatic hydrolysis of, product inhibition of, 510
Ligand, immobilized, macrokinetics of enzyme sorption on porous beads accompanied by complex formation with, 111
Lignin, natural birch, solid-state fermentation of, by *Phanerochaete chrysosporium*, 150
Ligninolytic fungus, *Phanerochaete chrysosporium*: mineralization of polychlorinated biphenyls by, 194
Lignocellulose biotransformation with immobilized cellulase, D-glucose oxidase and fungal peroxidases, 564
Lignocellulosic materials, conversion of, to single-cell protein (SCP): recent developments and problems, 197
Literature on molecular immobilization and bioaffinity phenomena: a quick reference summary of recent, 42, 90, 139, 182, 243, 307, 361, 409, 468, 521, 578, 635
Lytic enzyme system from *Cytophaga* sp., use of, in the lysis of Gram-positive bacteria, 73

Macrokinetics of enzyme sorption on porous beads accompanied by complex formation with an immobilized ligand, 111
Maintenance and operational stability of immobilized *Arthrobacter simplex* for the Δ^1-dehydrogenation of steroids, 377
Malic enzyme of *Achromobacter parvulus* IFO-13128, NADPH production from $NADP^+$ using, 418
Mass transfer effects in fermenations using immobilized whole cells, 2
Mathematical model for a batch reactor process, kinetics of the enzymatic hydrolysis of cellulose: (1), 346
Mesophyll cells isolated from *Psoralea bituminosa* leaves, division and growth of, 437
Metal oxide electrodes, *p*-benzoquinone activation of, for attachment of enzymes, 283
L-Methionine γ-lyase, versatile bacterial enzyme, 530
Microalgae, autotrophic production of, system design for, 474
Microalgae immobilized in carrageenan, wastewater nutrient removal with, 621
Microorganisms, release and containment of, from applied genetics activities, 314
Mineralization of polychlorinated biphenyls by *Phanerochaete chrysosporium*: a ligninolytic fungus, 194
Mutation of *Rhizobium trifolii* 11B, ultraviolet-irradiation induced and spontaneous, relation to water-soluble and water-insoluble polysaccharide production ability, 83

$NADP^+$ cycling at high efficiency, coimmobilized 12α-hydroxysteroid dehydrogenase and glutamate dehydrogenase with, preparation of 12-ketochenodeoxycholic acid from cholic acid using, 597

NADPH production from $NADP^+$ using malic enyzme of *Achromobacter parvulus* IFO-13182, 418
NAD^+, recycling of, immobilized thermophilic bacteria as a source of respiratory chain for, 29
NAD^+ synthetase from *Escherichia coli*, purification and immobilization of, 493
Neurospora crassa, production of ethanol from wood and agricultural residues by, 625
Nicotinamide adenine dinucleotide, D-glucose dehydrogenase, and a modified electrode, biofuel anode based on, 549
Nitrifying bacteria immobilized in calcium alginate, characterization of, 155
Nocardia corallina immobilized by gel entrapment or adsorption, epoxidation of propylene utilizing, 503

On-line monitoring of enzymes in downsteam processing by flow injection analysis (FIA), 607
On-line protein detection, rapid, in biotechnological processes by flow injection analysis (FIA), 146
Operational stability and maintenance of immobilized *Arthrobacter simplex* for the Δ^1-dehydrogenation of steroids, 377
Optimization of reaction conditions during enzyme immobilization on soluble carboxyl-containing carriers, 11
Overproduction of D-xylose isomerase in *Escherichia coli* by cloning the D-xylose isomerase gene, 592

Pachysolen tannophilus, fermentation of D-xylose by, effect of *in situ* ethanol removal on, 217
Paecilomyces lilacinus dextranase, purification and characterization of, 573
Patent reports, 44, 92, 141, 184, 245, 309, 363, 411, 470, 523, 580, 637
Penicillium funiculosum, cellulolytic activities of, production of xylanolytic enzymes in association with, 295
Pentachlorophenol, microbiological removal of, from soil using a *Flavobacterium*, 617
Phanerochaete chrysosporium, a ligninolytic fungus: mineralization of polychlorinated biphenyls by, 194
Phanerochaete chrysosporium, solid-state fermenation of natural birch lignin by, 150
L-Phenylalanine, pilot-scale production of, from D-glucose, 370
3-Phosphoglycerate kinase, pig muscle, immobilization of, 357
Photoproduction, hydrogen and oxygen, by *Chlamydomonas reinhardtii*, long-term endurance and selection studies in, 169
Physiology of alginate-immobilized *Chlorella*, 212
Pilot-scale production of L-phenylalanine from D-glucose, 370
Plant cell biomass, breakdown of, by filamentous fungi, 61
Plug-flow column reactor, a mathematical model for the process in, kinetics of the enzymatic hydrolysis of cellulose: (2), 383
Polychlorinated biphenyls, mineralization of, by *Phanerochaete chrysosporium*: a ligninolytic fungus, 194
Polysaccharides of microorganisms from degraded straw, 161
Polysaccharide, water-soluble and water-insoluble, production ability, ultraviolet-irradiation induced and spontaneous mutation of *Rhizobium trifolii* 11B in relation to, 83
Porous beads, macrokinetics of enzyme sorption on, accompanied by complex formation with an immobilized lignand, 111
Product inhibition of the enzymatic hydrolysis of lactose, 510
Propylene, epoxidation of, utilizing *Nocardia corallina* immobilized by gel entrapment or adsorption, 503
Protease productivity in chemostat fermentations with retention of biomass on suspended particles, 443
Proteinases, amino acid and peptide derivatives of dimethyl 5-aminoisophthalate as fluorogenic substrates for proteinases, 300
Protein detection, rapid on-line, in biotechnological processes by flow injection analysis (FIA), 146
Psoralea bituminosa leaves, division and growth of mesophyll cells isolated from, 437
Purification and characterization of two D-xylanases from *Trichoderma harzianum*, 425

Quinoprotein D-glucose dehydrogenase production in the culture medium of *Acinetobacter calcoaceticus*, 613

Raised-titre strains of *Acremonium chrysogenum*, production of cephalosporin C, and its intermediates, by, 389
Reactors, immobilized-yeast, flow rate and bead size as critical parameters for, 538
Reactor, rotating packed drum, for the production of ethanol from D-glucose, examination of immobilized cells in, 561
Reducing sugars, assaying for, and determining cellulase activity, comparison of the 3,5-dinitrosalicylic acid and Nelson–Somogyi methods of, 327
Release and containment of microorganisms from applied genetics activities, 314
Rhizobium trifolii 11B, ultraviolet-irradiation induced and spontaneous mutation of, in relation to water-soluble and water-insoluble polysaccharide production ability, 83
Rhodospirillum rubrum, extraction of chromatophores from, in aqueous two-phase systems: a method for large-scale isolation of membrane particles, 601
Rotational masking concept, using, to enhance substrate inhibited reaction rates: controlled pore supports for enzyme immobilization, 266
Ruminants, microbes from: anaerobic fermentation, 98

Saccharification by cellulases, measurement of, 586
Saccharomyces cerevisiae, enzyme induction by oxygen inthe accumulation of cytochrome *P*-450 during batch fermentations in 20% D-glucose with, 553
Sawdust, beech, autohydrolysed, alkali process for enhancing susceptibility of, to enzymatic hydrolysis, 126
Saccharomyces cerevisiae, a strain of, which grows efficiently on starch, 220
Scanning electron microscopic examination of calcium alginate beads immobilizing growing mycelia of *Aspergillus phoenicus*, 121
Sclerotium rolfsii, extracellular β-D-xylosidase of, 445
Series-type mechanism, categorization of enzyme deactivations using, 50
Sewage, domestic, and synthetic waste, studies with an anaerobic expanded bed reactor comparing the performances achieved with, 401
Simulation, failure, in continuous biomass production, 322
Single-cell protein (SCP): conversions of lignocellulosic materials to, recent developments and problems, 197
Soil, microbiological removal of pentachlorophenol from, using a *Flavobacterium*, 617
Solid state fermentation, engineering aspects of, 258
Solid state fermentation of natural birch lignin by *Phaenerochaete chrysosporium*, 150
Stabilization, enzyme, towards thermal, chemical and proteolytic deactivation, 78
Starch, strain of *Saccharomyces cerevisiae* which grows efficiently on, 220
Starch substrate, α-amylase degraded, comparison of action patterns of gelatin-entrapped and surface-bound glucoamylase on: a critical examination of reversion products, 22
Statistical methods, simple, increases in endo-1,4-β-D-glucanase titres produced by *Aspergillus fumigatus* through application of, 134
Stereospecific formation of 1,2-epoxypropane, 1,2-epoxybutane and 1-chloro-2,3-epoxypropane by alkene-utilizing bacteria, 17
Steroids, Δ^1-dehydrogenation, maintenance and operational stability of immobilized *Arthrobacter simplex* for, 377
Straw, degraded, some properties of polysaccharides of microorganisms from, 161
Straw, production of β-D-glucosidase, endo-1,4-β-D-glucanase and D-xylanase from, by *Aspergillus fumigatus* IMI 255091, 225
Substrate inhibited reaction, using the rotational masking concept to enhance rates: controlled pore supports for enzyme immobilization, 266
Sucrose hydrolysis using invertase immobilized on concanavalin A-Sepharose, 175
System design for the autotrophic production of microalgae, 474

Thermoanaerobacter ethanolicus, ethanol fermentation characteristics of, 87
Theremophilic bacteria, immobilized, as a source of respiratory chain for the recycling of NAD^+, 29
Triazine dyes, polymer-bound, partial purification of D-glucose-6-phosphate dehydrogenase from bakers' yeast by affinity partitioning using, 629
Trichoderma harzianum, D-xyanases purified from functional characteristics of, 431
Trichoderma harzianum, two D-xylanases from, purification and characterization of, 425

Ultraviolet-irradiation inudced and spontaneous mutation of *Rhizobium trifolii* 11B in relation to water-soluble and water-insoluble polysaccharide production ability, 83

Waste, synthetic, and domestic sewage, studies with an anaerobic expanded

bed reactor comparing the performances achieved with, 401
Wastewater nutrient removal with microalgae immobilized in carrageenan, 621
Whey permeate, lactic acid production from, by immobilized *Lactobacillus casei*, 164
Whey permeate, metabolic, physiological and kinetic aspects of the alcoholic fermentation of, by *Kluyveromyces fragilis* NRRL 665 and *Kluyveromyces lactis* NCYC 571, 287
White-rot fungus *Daedalea flavida*, laccase production and wood degradation by, 405
Wood and agricultural residues, production of ethanol from, by *Neurospora crassa*, 625
Wood and laccase production, by a white-rot fungus *Daedalea flavida*, 405

Xanthan production by *Xanthomonas campestris* NRRL B-1459 and interfacial approach by zeta potential measurement, 235
Xanthomonas campestris NRRL B-1459, xanthan production by, and interfacial approach by zeta potential measurement, 235
D-Xylanase complexes, and cellulase, immobilization of, from *Aspergillus terreus* F-413 on controlled porosity glasses, 395
D-Xylanase, β-D-glucosidase and endo-1,4-β-D-glucanase, production of, from straw by *Aspergillus fumigatus* IMI 255091, 225
D-Xylanases from *Trichoderma harzianum*, purification and characterization of, 425
D-Xylanases purified from *Trichoderma harzianum*, functional characteristics of, 431
Xylanolytic enzymes, production of, in association with the cellulolytic activities of *Penicillium funiculosum*, 295
D-Xylose, fermentation of, by *Pachysolen tannophilus*, effect of *in situ* ethanol removal on, 217
D-Xylose isomerase overproduction in *Escherichia coli* by cloning the D-xylose isomerase gene, 592
D-Xylose, kinetic studies of the enzymatic isomerization of, 129
β-D-Xylosidase of *Sclerotium rolfsii*, extracellular, 445

Yeast hexokinase, soluble and immobilized, comparative studies on, 275
Yeast, immobilized, reactors, flow rate and bead size as critical parameters for, 538

Zeta potential measurement, xanthan production by *Xanthomonas campestris* NRRL B-1459 and interfacial approach by, 235
Zymomonas mobilis, immobilized cells of, kinetics of ethanol production by, at varying D-glucose concentrations, 462

Reprints

Reprints of all articles in this journal are available in quantities of 100 or more

Reprints are essential–

- for the company that wants to distribute impartial comment on its activities to potential customers and clients
- for the company that wants to up-date its technical staff on new techniques and new technologies
- for the company that wants to publicize its research and development work
- for the training course organizer who wants to assemble key reading material for his students
- for the university or technical college lecturer who wants to distribute the latest information on a topic under study

For full details of prices and availability of reprints, please write to
